

EZ-Scan® Payments

EZ-Scan® Remit

EZ-Scan® Remit is a customized version of our EZ-Scan® Pro product, designed for desktop remittance processing. You get all the advantages of our Pro product and the plug-ins that will provide a complete system to capture data from coupons having barcodes or OCR printed lines. The captured coupon data can be parsed and matched against your existing customer data. Data can also be retrieved to show daily, weekly, monthly and yearly totals of all monies by client or show grand totals. Robust reporting is available to show summary and detailed payments grouped by customer, time range and more. Checks and coupons are linked together for research. All reports can be exported to an Excel, Word, HTML or customized file so you can easily integrate with your current accounting system.

A Check 21 compliant file can also be created so you can deposit your checks electronically if your bank accepts remote deposits. EZ-Scan® Payments software can offer you a low cost payment process that will improve your payment cash flow.

- Manage donor and pledge information easily.
- Captures front and back image of checks and coupons.
